Gen. Genet. 260:475-479(1998).
FUNCTION: THIS PROTEIN BELONGS TO THE HISTONE LIKE FAMILY OF PROKARYOTIC DNA-BINDING PROTEINS WHICH ARE CAPABLE OF WRAPPING DNA TO STABILIZE IT, AND PREVENT ITS DENATURATION UNDER EXTREME ENVIRONMENTAL CONDITIONS (BY SIMILARITY).
SIMILARITY: BELONGS TO THE BACTERIAL HISTONE-LIKE PROTEIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Immun. 59:3685-3693(1991).

-i. FUNCTION: TMP MAY SERVE AS A PORIN OR TRANSPORT PROTEIN FOR LARGE MOLECULES.
01-APR-1993 (Rel. 25, Created)
01-APR-1993 (Rel. 25, Last sequence update)
16-0CT-2001 (Rel. 40, Last annotation update)
Treponemal membrane protein B precursor (Antigen tmpB).
                                                                                Treponema phagedenis.
Bacteria; Spirochaetales; Spirochaetaceae; Treponema.
NGI TaxID=162;

    SUBCELLULAR LOCATION: OUTER MEMBRANE-ASSOCIATED.
    SIMILARITY: TO TMPB OF T.PALLIDUM.

                                                                                                                                                                            STRAIN=Kazan 5;

-!- FUNCTION: POSSIBLE STRUCTURAL ROLE IN THE SPERM TAIL. IT IS
ASSOCIATED WITH AXONEMAL STRUCTURES.
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- TISSUE SPECIFICITY: TESTIS. LOCATED IN SPERMATOCYTES AND
PROMOTES HEMAGGLUTINATION OF ERYTHROCYTES OF CERTAIN HOST SPECIES
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Drosophija hydei (Fruit fly).

                                                                                                      DOMAIN OF HEHA. PROGRESSIVE TRUNCATIONS FROM THE C-TERMINAL END DIMINISH THE APPINITY FOR HEPARIN.

PTM: GLYCOSYLATED. GLYCOSYLATION MAY PROTECT THE PROTEIN FROM PROTECLYTIC DERADATION AND BE IMPORTANT FOR HEMAGGLUTINATION. IN SUGGESTS THAT THE CARBOHYDRATE MOIETY MAY BE LOCATED WITHIN THE TERMINAL DOMAIN OF HEHA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

```
AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight of and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for all the invention are used as molecular weight markers for golypeptides of the invention are used as molecular weight markers for golypeptides of the invention are used as molecular weight markers for the diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases in conditions, e.g. multiple contitions, autoimmune oophoritis, autoimmune thyroiditis, autoimmune haemolytic anaemia, autoimmune oophoritis, autoimmune thyroiditis, autoimmune oophoritis, autoimmune thyroiditis, autoimmune cophoritis, autoimmune thyroiditis, autoimmune cophoritis, autoimmune thyroiditis, autoimmune vecetunitis, crohn's disease, diabetes mellitus, Graves disease, dullain-Barre's syndrome, Hashimoto's disease, mallitus, Crohn's disease, diabetes mellitus, crohn's disease, diabetes mellitus, crohned host-versus-graft disease, giraft-versus-seried disease, and delayed-type hypersenaitivity. The polypeptides of the invention have defined molecular weights and physecial properties which are analogous to molecular weights and physecial properties which are analogous to molecular mellicaner acetate molecules, which makes them ideal for use as
                                                                                                                                            Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                  Claim 10; Page 14; 72pp; English

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight cand an amino acid composition corresponding to the copolymer. The cand an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatizamer accetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune continued architect and include aither cell-mediated or antibody-mediated diseases and inflammatory conditions, e.g. multiple antibody-mediated diseases and inflammatory conditions, e.g. multiple condering diseases and inflammatory conditions, e.g. multiple acceptantis, autoimmune based, succimmune haemolytic ansemia, autoimmune ophoritis, autoimmune thrombocytopaenia cueoretinitis, contact sensitivity disease, diabetes mellitus, Graves purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves Calsease, Guillann-Barre's syndrome, Hashimoto's diseases, and myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic include host-versus-graft disease, graft-versus-praft disease, graft-versus-bost disease, and delined molecular weights and physical properties which are analogous to glatized and properties which makes them ideal for use as
                                                                                                                                                                                                                                      Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              64.8%; Score 138; DB 21; Length 109; 76.6%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                           MAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer accetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include archritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune ophoritis, autoimmune thyroiditis, autoimmune thoromocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves burpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, myasthenia gravis, psoriabilis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and phylpeptides of the invention have defined molecular weights and phylpeptides of the invention have defined molecular weights which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Copolymer; molecular weight marker; TV-marker; immune disease; glatiramer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antithyroid; antianflammatory; antidabetic; thyromimetic; hamemostatic; antipsoriatic; dermatological; antidamentor; condition; mantiane energy condition; multiple sclerosis; theumatoid arthritis; inflammatory condition; multiple sclerosis; theumatoid arthritis; crohn's disease; chronic immune thromborytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guillain-Barre's syndrome; psoriasis;
                                                                                                                                                                                                                                                                                                   Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:5.

MAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (1) for determining the molecular meight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatorid arthritis, osteoarthritis, autoimmune haemolytic uveoretinits, crohn's disease, chronic immune thyroidutis, autoimmune unamental autoimmune cophoritis, autoimmune thyroiditis, autoimmune cure uveoretinitis, crohn's disease, chronic immune thrombocytopaenia purque, collitis, conteat sensitivity disease, diabetes mellitus, Graves disease, duillain-Barre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, peoriasis, pemphigus vulgaris, or systemic luna, a prace and a present and a prace and a prace and a present and a prace and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous glatiramer acetate molecules, which makes them ideal for use as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:6.

antibody-mediated diseases. Such diseases include archritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic anaemia, autoimmune opportitis, autoimmune thyroiditis, autoimmune uveoretinitis, Crohn's disease, chronic immune thrombocytopaenia purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, dilabetes mellitus, Graves disease, Guillain-Barre's syndrome, Hashimoto's disease, idiopathic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight. TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight and an amino acid composition corresponding to the copolymer. The polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  defined molecular weights and physical properties which are analogous to glatiramer acetate molecules, which makes them ideal for use as
                                        glatitamer acctate, autoimum disease, antiatthritic, neuroprotective, osteopathic, immunosuppressive, antithyroid, antiinflammatory, antiantediabetic: thyromimetic; harmostatic; dermaclogical, antiansemic; immunosuppressive, demyelinating disease, osteoarthritis; inflammatory condition, multiple sclerosis; rheumatoid arthritis; Crohn's disease; chronic immune thrombocytopaenia purpura, colitis; diabetes mellitus; Graves disease; duillain-Barre's syndrome; psoriasis; pemphigus vulgaris; systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases.

AAY82571 to AAY82577 represent specifically claimed copolymer molecular weight TV-marker polypeptides from the present invention. The present invention describes polypeptides (I) for determining the molecular weight cand an amino acid composition corresponding to the copolymer. The colypeptides of the invention are used as molecular weight markers for polypeptides of the invention are used as molecular weight markers for glatiramer acetate related tetrapolymers. The polypeptides may also be used for treating and preventing include either cell-mediated or diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, cantibody-mediated diseases. Such diseases include arthritic conditions, cantemia, autoimmune ophoritis, osteoarthritis, autoimmune haemolytic ansemia, autoimmune ophoritis, autoimmune thrombocytopaenia cuecertinitis, contact sensitivity disease, diabetes mellitus, Graves Co disease, Guillain-Barres syndrome, Hashimoto's disease, midipathic myxocdema, myasthenia gravis, psoriated disease, which can be treated condingue erythematosus. Mediated-mediated diseases which can be treated condingue erythematosus weights and physical properties of the invention have condingue mysochema majogus to delined molecular weights and physical properties which mare analogous to delined molecular weights and physical properties which mare analogous to malon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   7
                                                                                                                                                                                                          glatitamer acetate; autoimmune disease; antiarthritic; neuroprotective; osteopathic; immunosuppressive; antichyroid; antinflammatory; antidiabetic; thyromimetic; haemostatic; antipsoriatic; dermatological; antianaemic; immunosuppressive; demyelinating disease; osteoarthritis; inflammatory condition; multiple sclerosis; rheumatoid arthritis; Crohn's disease; chronic immune thrombocytopaenia purpura; colitis; diabetes mellitus; Graves disease; Guilain-Barre's syndrome; psoriasis; Hashimoto's disease; idiopathic myxoedema; myasthenia gravis; pemphigus vulgaris; systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Copolymer 1 related polypeptides used as molecular weight markers for glatiramer acetate and for treatment and prevention of immune diseases
                                                                                                                                                   Copolymer molecular weight TV-marker amino acid sequence SEQ ID NO:4.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

segments: YKK, AAB, KAK, EKA, KKA, YEA, AKA KEA, and AAA. The N-terminal alanine residue is left behind following CNBr cleavage of the fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       To improve the expression of rCOP-1 polypeptides in E. coli, genes coding for rCOP-1-19 were subcloned from pREV 2.1 to pBG3-2deltaN (deposit: 20-NOV-1984 US4681009, NRRL B-15910), a plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and rCOP-1 sequences. A methionine residue occurs between the Protein A and rCOP-1 sequences, originating from the 5' linker sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protein. rCOP-1-19 contains oligomucleotide duplexes incoding the following segments: YKK, AAB, KAK, EKA, KEA, YEA, AKA KEA, and AAA. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The product prevents or arrests experimental autoimmune encephalomyelitis. They are used to prevent, arrest or control ademyelinating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              weight TV-marker polypeptides from the present invention. The present invention describes polypeptides [1] for determining the molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight of a copolymer (CP), which has an identified molecular weight markers for glatifader acetare related tetrapolymers. The polypeptides may also be used for treating and preventing immune diseases in a mammal. Autoimmune diseases which may be treated include either cell-mediated or antibody-mediated diseases. Such diseases include arthritic conditions, demyelinating diseases and inflammatory conditions, e.g. multiple sclerosis, rheumatoid arthritis, osteoarthritis, autoimmune haemolytic ansemia, autoimmune opophoritis, autoimmune thyroiditis, autoimmune uvecretinitis, crohn's disease, diabetes mellitus, Graves purpura, colitis, contact sensitivity disease, diabetes mellitus, Graves disease, duilain-arre's syndrome, Hashimoto's disease, idiopathic myxoedema, myasthenia gravis, psoriasis, pemphigus vulgaris, or systemic lupus erythematosus. Mediated-mediated diseases which can be treated include host-versus-graft disease, graft-versus-host disease, and delayed-type hypersensitivity. The polypeptides of the invention have defined molecular weights and physical properties which are analogous to mylerilar.

```
This compound represents a glycopeptide effective in inhibiting the binding of labelled mannosylated BSA to mannose receptors. Mannose receptors are uniqualy found on macrophages and not on manocytes. Glycopeptides such as this provide a mechanism to target macrophages captions the provide a mechanism to target macrophages appecifically, to image, label, destroy or otherwise alter their antigen processing function. In addition they can be conjugated to antigen processing function. In addition they can be conjugated to altigen processing function. In addition they can be conjugated to cold supports and used to purify mannose receptors from a variety of sources. They are useful in the treatment of inflammatory diseases driven by macrophages ecretory products eg. Crohn's diseases infectious diseases in which macrophages harbour replicating infectious agents eg. Legionnaires disease, viral infections involving mononuclear phagocytes eg. HIV and lysosomal storage diseases, in which macrophages are principally involved eg. Gaucher's disease, asthma mediated by systemic macrophages. The peptides controlling metastasis, mediated by systemic macrophages to a macrophage to marshal an immune response; also self peptides to prevent tissue transplant rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antibacterial, gene therapy, vaccine, biosynthesis, biodegradation, vitamin B12, bacterial infection, disease.

coding for TCOP-1-77 were subcloned from PREV 2.1 to pBG3-2deltaN (deposit: 20-NOV-1984 US4691009, NRRL B-15910), a plasmid used to express Protein A. The resulting plasmids encode fusion proteins consisting of beta-glucuronidase, Protein A, and TCOP-1 sequences. A methionine residue occurs between the Protein A and TCOP-1 sequences, originating from the 5' linker sequence, in order that the COP-1 polypeptide may be cleaved from the fusion protein. TCOP-1-77 contains oligonuclectide duplexes incoding the following segments: YKK, EAE, KAK, AAK, and AAA. The N-terminal alanine residue is left behind following CNBr cleavage of the fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The product prevents or arrests experimental autoimmuse encephalomyelitis. They are used to prevent, arrest or control sdemyelinating disorder, e.g. multiple sclerosis. They may also be used as additives to hair care products to confer beneficial effects on damaged hair or as supplements for diets deficient in
                                                                                                                                                                                                                                                                                                                                                                                                                                                        improve the expression of rCOP-1 polypeptides in E. coli,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and continuous and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome caquence and proteins selecting compositions for the treatment or prevention of infections by L. Monocytogenes and related organisms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

The invention provides a method for the diagnosis, prevention and treatment of ulcerative colitis (UC) using histone H1-like antigen, a porini antigen or a Bacteroides antigen as a target antigen. The novel method of diagnosing UC in a subject suspected of having inflammatory bowel disease (IBD) comprises: (1) obtaining a sample from the subject; (2) contacting the sample with a histone H1-like antigen, or perinuclear anti-neutrophil cytoplasmic antigen, or the pANCA-reactive fragment, complex of the histone H1-like antigen, and (3) detecting the presence or absence of the complex; and antibody to the histone H1-like antigen; and (3) detecting the presence or absence of the complex; indicates that the subject has UC. The pANCA-reactive histone H1-like antigen are useful in the antigen, porin antigen and Bacteroides antigen are useful in the diagnosis, prevention and treatment of UC. The methods can also be used for identifying agents useful for treating UC. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              M. vaccae proteins. The M. vaccae proteins may be employed to activate T cells and natural killer cells, to stimulate the production of cytokines, to enhance the expression of cy-stimulatory molecules on dendritic cells and monocytes, and to enhance dendritic cell maturation and function. The proteins can be expressed by standard recombinant methodology. Pharmaceutical compositions comprising the proteins or nucleic acid sequences encoding the proteins or nucleic acid sequences encoding the proteins or nucleic acid sequences encoding the proteins in the compounds and diseases, immune disorders and cancer. In particular, the compounds and methods are used for treatment of diseases of the respiratory system, such as mycobacterial infections, asthma, allergies, tuberculosis, leprosy, sarcoidosis and lung cancers, and disorders of the skin such as posciasis, atopic dermatitis, eczema, allergic contact dermatitis, alopecia areata, and skin cancers such as basal carcinoma, squamous cell carcinoma and melanoma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptide (II) sequences. (II) is useful as hybridisation probes, polypeptide (II) sequences. (II) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The polymucleotides are also used in disgnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in
                                                                                                                                                                      designated 214.
                                     The invention provides a method for diagnosing ulcerative colitis in a
                                                     subject suspected of having inflammatory bowel disease. The method comprises reacting a patient sample with a porin antigen that is immunologically reactive with pANCA (perinuclear anti-neutrophil cytoplasmic antibodies) and detecting formation of a Ag-pANCA complex as indicative of ulcerative colitis. The method is used to diagnose ulcerative colitis to it. The present sequence represents a histone HI-like protein of M. tuberculosis, designated 21
                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

Sequence 39, Application US/09041889
Patent No. 6033864
GENERAL INFORMATION:
APPLICANT: Braun, Jonathan
APPLICANT: Cohavy, Offer
TITLE OF INVENTION: Diagnosis, Prevention and Treatment of
TITLE OF INVENTION: Ulcerative Colitis, and Clinical Subtypes Thereof, Using
TITLE OF INVENTION: Microbial UC PANCA antigens
                                                                                                                                                                                                                                                                                                                                                                                                                            42.0%; Score 89.5; DB 3; Length 214; 55.6%; Pred.
